

ARMR HPR 3.0

But airborne pollutants will be working extra hard to get an **A+** in creating pollution, mold, fungi, and bacteria losses.

Schools, colleges, and educational facilities have more environmental/pollution exposures than many people think. For most folks, the word "school" makes them think of gym class, or recess, or cafeteria lunches. While the food may not be great, most people wouldn't characterize it quite at the level of having pollution or environmental contamination. The food aside, common environmental and pollution exposures found at schools and educational facilities are very preventable!

Preventative Risk Management with ARMR HPR 3.0

The program includes a no-cost water emergency risk management and response plan performed in-person by a water and mold restoration specialist within the ARMR Network. So when a water emergency happens the school district is prepared and knows whom to call.

STUDENTS HOME FOR THE SUMMER

Designed Environmental Insurance Policy

The program includes a competitively priced insurance policy designed specifically for commercial properties including school buildings. Includes mold, bacteria, lead, and asbestos, coverage to close the gap in coverage on their current General Liability and Property policies.

Minimum premiums starting at \$3,000 1 year term
* 3-year terms are available!

Quotes are as easy as 1, 2, 3!

1. Send in the current property schedule/SOV
2. Send in a copy of the property declarations page
3. Include property premium including flood and windstorm if applicable
